

Bug reporting

Bug Title: Currency Dropdown Modal Persistence Issue

Severity:

Low

Environment:

- Browser: Chrome 
- Device: MacBook Pro 
- Location: Gamdom Website (Logged-in User View)

Description:

In the Gamdom website's top bar, the currency dropdown modal does not close upon clicking outside of it. This behavior is inconsistent with similar modals on the site (e.g., the language picker in the footer), leading to a disjointed user experience.

Steps to Reproduce:

1. Log into the <https://www.gamdom.com/> website.
2. Click on the currency dropdown in the top bar to expand the modal.
3. Attempt to close the modal by clicking outside its area.

Expected Result:

The modal should close when clicking outside of it, aligning with the behaviour of other similar elements on the site (eg. language dropdown in the footer of the page).

Actual Result:

The modal remains open despite clicking outside of it.

Additional Information:

- This issue disrupts the expected flow of user interaction.

Recommendation:

Adjust the modal's behaviour to close upon external clicks for a consistent and intuitive user experience across the site.
